Microservice Environment

Very Good

RabbitMQ

Very Good

Unit and Integration Tests

Excellent

SQL

Very Good

Angular

I am a talented full stack software developer with almost 9 years of experience working on both environments monolithic and microservices. I am aimed to software quality then he knows and applies the good practices for unit, and integration and functional tests (xUnit, nUnit, MsTest, SpecFlow). In addition, I learnt about docker by himself and use it very well in your development environment. Furthermore, I am not stuck in a single development language his main language and knowledge is C# (.Net Framework/Core) but he already worked with React, Angular, Java, Kotlin and Node. Also, I invested in my professionalization, and I hold a bachelor's degree in Software Engineering. Also, I am used to work in an agile environment using Scrum, Kanban or even Scrumban.

I am skilled at communicating with the diverse parties involved in the development process to efficiently solve problems. Also, I am passionate about my work and adapt quickly to new technologies, constantly looking to improve and learn. My experience allows me to get involved in the full development process from planning to deployment.

Work Experience

2021-07 – Current

Senior Software Engineer

Braga, Portugal

- Maintain a scalable Identity Server (.Net Core) with a frontend in React(with hooks) used by the entire company and partners to authenticate and authorize users and applications. Add custom flows that will allow the users have a faster access to the applications.
- Application monitoring to get the improvement points.
- Guarantee best value and quality to the application's users from the task conception to deployment.
